Systems of General Sales Taxation: Theory, Policy, and Practice (Series on International Taxation)

Robert F. van Brederode

Sales taxes – including gross receipt taxes, retail sales taxes and value added taxes – are a key part of the fiscal revenue of many countries. Given an increasingly global economy – and the recent stresses to which it's been subjected – many issues come into play in connection with the legal, tax policy and economic implications presented by the taxation of international transactions.

This thoughtful work begins with the basics and approaches sales taxation from a number of different aspects. It provides in-depth economic analysis (for non-economists) of all the taxes covered, including tax shifting, tax incidence, the economic effect of reduced rates and exemptions, tax accumulation, regressivity, and the Laffer curve approach. In addition, it offers a tax policy approach in regard to specific economic sectors such as the treatment of small enterprises, financial services, and real property.

This highly useful reference employs a comparative focus as well, especially where US sales tax is contrasted to EU VAT (e.g., in regard of e-commerce and the treatment of capital goods). Last but not least, the work offers insightful legal analysis in such key areas as cross-border transactions and US constitutional restraints.
