Tools for Computational Finance (Universitext) Rüdiger Seydel

The disciplines of financial engineering and numerical computation differ greatly, however computational methods are used in a number of ways across the field of finance. It is the aim of this book to explain how such methods work in financial engineering; specifically the use of numerical methods as tools for computational finance. By concentrating on the field of option pricing, a core task of financial engineering and risk analysis, this book explores a wide range of computational tools in a coherent and focused manner and will be of use to the entire field of computational finance. Starting with an introductory chapter that presents the financial and stochastic background, the remainder of the book goes on to detail computational methods using both stochastic and deterministic approaches.

Now in its fifth edition, Tools for Computational Finance has been significantly revised and contains:

- A new chapter on incomplete markets which links to new appendices on Viscosity solutions and the Dupire equation;
- Several new parts throughout the book such as that on the calculation of sensitivities (Sect. 3.7) and the introduction of penalty methods and their application to a two-factor model (Sect. 6.7)
- Additional material in the field of analytical methods including Kim's integral representation and its computation
- Guidelines for comparing algorithms and judging their efficiency
- An extended chapter on finite elements that now includes a discussion of two-asset options
- Additional exercises, figures and references

Written from the perspective of an applied mathematician, methods are introduced as tools within the book for immediate and straightforward application. A 'learning by calculating' approach is adopted throughout this book enabling readers to explore several areas of the financial world.

Interdisciplinary in nature, this book will appeal to advanced undergraduate students in mathematics, engineering and other scientific disciplines as well as professionals in financial engineering.

From reader reviews:

John Carter:

Nowadays reading books become more than want or need but also work as a life style. This reading addiction give you lot of advantages. The advantages you got of course the knowledge the rest of the information inside the book in which improve your knowledge and information. The information you get based on what kind of reserve you read, if you want attract knowledge just go with schooling books but if you want really feel happy read one along with theme for entertaining like comic or novel. The Tools for Computational Finance (Universitext) is kind of guide which is giving the reader erratic experience.

Jesus Loveless:

This Tools for Computational Finance (Universitext) is great publication for you because the content that is full of information for you who also always deal with world and get to make decision every minute. This particular book reveal it data accurately using great coordinate word or we can claim no rambling sentences included. So if you are read this hurriedly you can have whole data in it. Doesn't mean it only will give you straight forward sentences but hard core information with wonderful delivering sentences. Having Tools for Computational Finance (Universitext) in your hand like finding the world in your arm, data in it is not ridiculous just one. We can say that no reserve that offer you world within ten or fifteen moment right but this reserve already do that. So , this really is good reading book. Hello Mr. and Mrs. stressful do you still doubt which?

Ettie Hardcastle:

As we know that book is vital thing to add our expertise for everything. By a e-book we can know everything we would like. A book is a list of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This reserve Tools for Computational Finance (Universitext) was filled about science. Spend your extra time to add your knowledge about your research competence. Some people has different feel when they reading a new book. If you know how big good thing about a book, you can truly feel enjoy to read a guide. In the modern era like currently, many ways to get book you wanted.

Darrell Mayo:

As a college student exactly feel bored to be able to reading. If their teacher asked them to go to the library or to make summary for some reserve, they are complained. Just minor students that has reading's internal or real their leisure activity. They just do what the trainer want, like asked to the library. They go to at this time there but nothing reading really. Any students feel that reading through is not important, boring in addition to can't see colorful images on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this Tools for Computational Finance (Universitext) can make you feel more interested to read.
