D-Star for Beginners (2014) Brian Schell

A Practical, What-You-Need-to-Know Guide to Getting on D-Star D-Star is a powerful system for linking the worlds of amateur radio and the Internet. You can link your handheld radio to repeaters, individuals, or reflectors located anywhere in the world, quickly and easily. And because it's all digital, you get crystal clear, digital sound. The book covers the setup and use of three different D-Star hardware configurations:

- **DV-Dongle:** A small device that lets you access the entire D-Star network from your computer. No radio is required.
- **Icom IC-92AD Radio:** A small handheld radio that is very common. The setup for most Icom radios is very similar to this, so if you have another Icom, it's easy to adapt these instructions.
- **DVAP:** A device that combines the other two methods. Use your handheld radio to transmit to a small device on your computer that encodes your digital radio signal and transmits it through the Internet.

Inside you'll find step-by-step tutorials on how use your radio or dongle to:

- Use RT System's programming software to program the radio (CHIRP is similar)
- Connect to D-Star Reflectors
- Link to distant repeaters
- Link to individuals without knowing their location
- Use various online tools to find frequencies, command strings, Nets, and more!

This short book gives you a simple step-by-step walkthrough of all the options to set up your D-Star station using dozens of screenshots and many examples. The whole process is detailed, from registering your call sign with the D-Star network to installing the DVAP or DV-Dongle software on your PC or Mac and making your first calls to individuals, ham repeaters, or reflectors.
